

# Table of Contents

## TO THE READER

Prologue: The Earth: As You Like It?

## Chapter 1: The Insignificance of the Earth

The seeds of science

Prehistory

Early Antiquity

Classical Greek and Roman philosophy

Middle Ages

The 1500s: the rebirth of science

The Sortie of Giordano Bruno

Bruno's teachings

Bruno's philosophy

Update

Bottom Line, Science: tell it like it is

Notes

## Chapter 2: The Vastness of Space

Practical naked-eye astronomy

Time of day

Time of year

Calendar systems

Navigation and the size of the Earth

Naked-eye planetary astronomy

Distance and Parallax

The size and distance of stars  
The telescope: A new view of the sky  
Galileo's discoveries  
Kepler's reply to Galileo: Trouble from a safe place  
Galileo and the Church after 1615: Forever amber  
Retrospective and lunar occultations  
Brightness and star distance: Starlight, star bright  
How big are the other planets and the Sun?  
Bottom line, update, and parallax  
[Primer on Geometry](#)  
[Notes](#)  
[Do-it-yourself activities](#)

### Chapter 3: The New Math and Some Physics

Relativity of motion  
  
Flexible mathematics  
Kepler and ellipses  
Graphs and 3-dimensional curves  
Falling bodies  
Calculus  
Unanticipated results from mathematical physics  
Precession and related effects  
Neptune, Mercury, and general relativity  
Bottom line: Please keep things simple!

### Chapter 4: Interlude: What is Science; What is Life?

Science and imagination  
Magically thinking  
Ancient and medieval science  
Organized pseudoscience

## Recognizing life

Microbes

Semantics and obscurantism surrounding life forms

## Life as chemistry

Basic chemistry

Sluggish reactions: a food for life

Water: the base of life

Carbon, organic chemistry, and information storage

Water, carbon, and sugar

Enclosed cells

## Weird Life

Carbon and noncarbon life

Replacing water

Executive summary: Science, life, ignorance, and bliss

## Notes

## Chapter 5: Geological Time: So Much, So Little

The sequence of local geological events

Questions about the Flood

Locally variable geology: Bon voyage! Bye-bye to an onion

Hutton and lengthy geological time

Fossils and time

Geological maps

Global fossil time scale

Absolute Geological Time

The rate of sediment accumulation: The dust on antique time would lie  
unswept

Rate of earth movements

Enough time for evolution?

Heat flow from the Earth's interior

Radioactivity: A gentlemen's wager

Modern geochronology

Recent geological activity on the Earth

Cosmic time

Why is it dark at night?

The Big Bang

Bottom line: Old Earth and Young Universe

Notes

Exercise

## Chapter 6: Inconstant Stars

The Physics of Stars

Primer on spectra and nuclear physics

Composition and energy source of the Sun

Our instantaneous view of space

How the Sun works

Fusion within other stars

The life history of stars

Making planets

Solar nebula

Making planets from rocks

Detected extrasolar planets

Other ways to look for planets

Bottom line: The Sun also rises

Notes

## Chapter 7: A Clement Climate

The Earth's Atmosphere

Finding air

Pressure and elevation

Alchemy becomes chemistry

An arcane concoction

The mechanics of air

Fair and foul air

Lots of atoms

Maintaining a planetary atmosphere

The edge of space

Planetary surface temperatures

Primer on radiation of heat

Airless planets

Greenhouse planets

Application to the present Earth

The Earth over geological time

What went wrong with Venus?

Future Earth

Early Venus

Martian canals and reality

Dune

Executive summary

Notes

Exercises

## Chapter 8: The Earth: A Churning Planet

### Geological evidence for a changing Earth

- Subsidence of sedimentary basins

- Floating continents

- Post-glacial rebound

### Moving continents

- Paleontology and other “soft” evidence

- Search for a mechanism

### New technology and seafloor spreading

- Moonless mountains on the ocean bottom

- Cold war oceanography

- Serpentine from the seafloor

- Lodestone and missing links

- Marine magnetism and seafloor spreading

- Testing seafloor spreading

### Plate tectonics

- Transform faults

- Nuclear tests and modern seismology

- Subduction: Cold fog and hot volcanic ash

- Global tectonics

- Passive margins as bumper cars

### Rock cycle and habitable global geochemistry

- Serpentine and oxygen

- Geochemistry of ridge axes

- Hot hydrothermal vents

- Fresh air and churning rock

- Global water budget

Ebb and flow of water from the continents

Life on a water-covered planet

Life history of planets

Mars

Future Earth

Venus

Executive summary

Notes

Exercises

## Chapter 9: Biological evolution: Real Correlations and False Coincidences

Natural Theology to natural selection

Daily coincidences

Spontaneous generation and begetting

Seeking the plan of nature

Darwin: insight and hesitation

Publication

Backlash and debate on evolution

Evolutionary contrivances

Microbes and genes

Life at elevated temperatures

Other “extreme” environments

Garden peas

Genetic diseases

Genetic science

Molecular genetic code breaking

Immortality of genes

The tree of life  
Early biology and present variety

### Life's origins

Looking back  
Starting life from scratch  
Meteorites with organic matter

### Bottom lines

Notes

Exercises

## Chapter 10: The trials and tribulations of Mother Earth

### The Gaia hypothesis

Working together  
Feedback and control

### Starting life in the dark

Serpentine: Rocks for lunch  
Using energy: ATP and small change

### Photosynthesis and the short-term carbon cycle

Living at the surface  
Getting started with photosynthesis  
Photosynthesis without oxygen production  
Oxygen-producing photosynthesis

### Oxygen atmosphere

Primer on the long-term carbon cycle  
Rock sinks for oxygen  
Methane and excess oxygen  
Oxygen events in Earth history  
Evidence from isotopes

Snowball Earth: Trial by ice

Glaciers in the rock record

Primer on climatic belts: Grab the brass ring

Some physics of ice ages

The gist: Living is hard but life is tough

[Primer on Economics](#)

[Exercises](#)

## Chapter 11: Asteroid impacts: Living at Ground Zero

Asteroids: Vermin of the skies

A hole in the Arizona desert

Tunguska

Lunar craters

Target Earth

An Italian outcrop and an asteroid impact

Crater hunt

Extinction

Permian-Triassic extinction: The Great Dying

Bigger ammo on the Early Earth

Bottom line: A night to remember

[Notes](#)

[Exercises](#)

## Chapter 12: Life on Mars

Mars and magnets

Wet Mars

Pathfinder

More rovers, orbiters, and surface chemistry on Mars

Recent surface activity

Interplanetary life transfer: If you don't like here it you can leave!

Mars rocks

Meteorites as a refuge: Lice

Looking at the genome

Toward the bottom line: Looking for life on Mars

Notes

### Chapter 13: More Abodes for Life

Venus: Hell and Purgatory

Ceres: seeds of life?

Ice worlds

Jovian moons

Titan: An airy moon

Enceladus: The fallen giant

Red dwarf planets

Red-giant planets

Checklist for life hunts: An embarrassment of riches

Notes

### Chapter 14: Little Green Men

Getting street smarts

Human evolution.

Scaffolding: Genes and complex life

Cambrian explosion: more about complex life

Thermoregulation: If your feet are cold put on your hat

Spare change: Large one-celled organisms

Planetary Stewardship

The population explosion

Energy and global warming

Comets and Asteroids: Harbingers of doom

Break glass and open in case of danger in 400 million years

Where are the ET and what are they like?

Calling ET

Thou shall not covet?

Executive summary: Reality and dogma

[Primer on signals and communication](#)

[Notes and Exercises](#)

Epilogue: The Morning After 400 Years of Data and Science in Practice

Being logical

Testable and compromising positions

Technology versus insight, a retrospective

Technology and logistics: the planet of the octopi

[Essay exercises](#)
